

Checklist of Delayed or Incomplete Visual Development Symptoms

This checklist provides examples of what child with delayed or incomplete visual development symptoms might display as issues or concerns. This is only meant as a guide. If you have concerns, contact your child's pediatrician or schedule a free screening with PhysioKids.

- Lack of reading readiness
- Immaturity
- Poor coordination
- Poor visual attention and/or distractibility
- Inappropriate behavior
- Poor peer relationships

Key Question: Does your child seem to always lag behind in school, sports, or social activities?
